Post-Crisis Challenges in Emerging Europe’s Financial Sector

OeNB Conference “Catching up Strategies after the Crisis”
Vienna, November 15-16, 2010

Piroska Mohácsi Nagy
Director for Country Strategy and Policy
EBRD
Key points

- Post-crisis recovery underway – but is the region out of the woods?
- Post-crisis policy responses – enough for the needed new growth agenda?
  - Compare with post-Asia crisis 1997/8
- Will capital inflows return to the region?
- A new ‘banking model’?
- No room for complacency
Post Crisis Recovery
The recovery is underway and convergence play is back - although at a slower pace

• Slower recovery despite much sharper output collapse
• Large dispersion among countries

Sources: EBRD Regional Economic Prospects October 2010; IMF WEO October 2010.
Competitiveness improving only gradually to spur growth

- Post-Lehman, real effective exchange rates depreciating, less for “fixers” (except Latvia) than for “floaters”
- Need reforms + investment + cost containment

![Real effective exchange rate (Q1 2007=100)](chart)

- Lehman collapse
- Latvia
- Fixed X rate (ex. Latvia)
- More flexible regimes
Slow return of capital inflows led by FDI

- FDI returning, especially because of bank recapitalizations
- Exception: Poland and Turkey: large inflows with portfolio (part of the global EM story)

**Net Capital Inflows**
(% of GDP)

**Latin America**: Brazil, Colombia, Mexico; **Asia**: India, Indonesia, Thailand; **EBRD region**: 24 out of 29 EBRD countries of operations; **EBRD magnets**: Poland, Turkey
High and sometimes still rising NPLs

Nonperforming Loans
(Index June 2008=100)
Hence, slow recovery in credit growth
Widespread fiscal consolidation weighs on domestic demand

- But necessary after large deficits from crisis in some countries

Fiscal consolidation, 2009-2011 1/

1/ Budgetary impact over three years of announced measures to reduce expenditures or raise taxes.
New Growth Agenda – Is Enough Happening?
Sustaining growth under a ‘New Growth Agenda’

- Pre-crisis growth model based on domestic demand, fuelled by capital and commodity export inflows
- Post-crisis this looks neither desirable nor feasible
- New growth agenda:
  - More domestic savings, less foreign (currency) borrowing
  - Sustained competitiveness boosting trade integration and exports
  - Improving business environment and institutional setup (regulation, state involvement)
Local currency development

- High foreign currency lending and excessive reliance on foreign savings have proven a source of vulnerability during the crisis
- Encouraging a shift towards local currency requires country-by-country approach with coordination
  - Macroeconomic stabilization
  - Regulation
  - Capital market development
Money markets lack depth and liquidity

EBRD money market development index

What happened to currency composition of lending during crisis?

Large LC credit flows to some countries reflect state-subsidised or state-directed lending.
Renewed regulatory attention

- Effort thus far failed at the EU level; ECB concerns
- Nation-based efforts mainly by host authorities but also home (Austria’s lead)
- Host efforts
  - Higher reserve and capital requirements on FX loans
  - Quotas on FX lending
  - Macro-prudential and risk management instruments
    - Higher creditworthiness and disclosure requirements
    - Limits on the open foreign currency position of banks
  - Effective ban on foreign currency lending (Hungary (recently), Ukraine, Moldova)
- Need for coordinating host-home (Vienna Initiative umbrella)
Discouraging foreign currency lending

Regulatory instruments to discourage foreign currency lending

- Higher capital requirements (FX>LC)
- Restrictions on FX lending
- FX position limits
- Stricter measures of indebtedness for FX loans
- Codes of conduct discouraging FX Use
- Deposit insurance favoring LC deposits
- Ban on FX lending
- Higher provisioning requirements (FX>LC)
- Higher reserves requirements (FX>LC)
- Stricter LTV limits for FX
- Stricter eligibility criteria on FX loans
- Enhanced customer disclosure of FX risks
- CB or regulatory agency guidance to discourage FX use

Number of regulatory instruments

Ban on FX lending in various countries:
FX stocks can still be a problem in some cases

- Austria has managed
- Depends on size, currency, and maturity
  - Fx denominated household credit at about 20% of GDP in Hungary, but at 10-11% in Poland, Romania
  - Hungary: 82% of all Hh fx loans in CHF
- It can become a “political” problem → preventive solutions?
Sustaining trade integration and export growth

- Export growth has been rapid...

- ...but based in part on one-off factors (new trade agreements, low initial unit labour cost, rapid global trade expansion)

- Sustaining export growth will require
  - improving competitiveness
  - overcoming/dismantling nontariff barriers
  - enhancing business climates

Growth in Unit Labour Cost 2001-2009

Sources: ILO (2006); IMF DOTS.
Capital is likely to return to the whole EE region

- **Sort term: possibly welcome**
  - Return of much needed capital can help recovery
  - Unlikely to be massive as the traditional channel through bank groups is impaired by weak balance sheets and still rising NPLs
  - Will help build reserves which are needed (intervention with sterilisation although with usual risks)
    - Little room for appreciation – this is not China or Brazil
    - Capital controls are difficult in the region (EU, candidates)

- **But an escalation into a “trade war” would be damaging even in the short term**

- **Longer-term: same issues as in other EMs**
Comparison with Asia 1997/8: massive competitiveness gains

- Supported by a combination of policies
  - Closing and restructuring/cleanup of balance sheets of banks and corporates
  - Structural reforms: labour market, trade and current account liberalisation
  - Corporate governance
  - Dramatically improved banking regulations
- Deliberate ‘self-insurance’
Self-Insurance

Current Account

International Reserves

Note: Latin America includes Brazil, Colombia, Mexico. Asia includes Korea, Indonesia, Thailand.
“New banking model”

- First clean up your balance sheet if needed
- Return to the “basics”:
  - Era of cheap liquidity to fuel boom should be over
  - more reliance on LCY deposits and lending in LCY
  - “know your customer”
- Participate in what is new: local capital market development (covered mortgage bonds etc) → look beyond banking
- Many countries are still under-monetised: lot of business opportunities - but within a stricter regulatory environment
- Regulatory uncertainties not over: cross border issues – deal with it: ESRB, Vienna Initiative Plus?
Conclusion: Well Done - but No Complacency

- After successful crisis response need a successful recovery
- Thus far focus is on (limited) balance sheet clean-up, LCY markets and fiscal sustainability
- Not enough done to unleash the potential for more sustainable growth
- Reforms are also needed to build up buffers to enable countries for countercyclical policies for future shocks
- Continued significant business opportunities in the financial sector → look beyond banking
- Time is of the essence: reforms to be entrenched before growth can resume or capital inflows return
Thank you!
