Source: OeNB.

<sup>1</sup> The first-half data are the whole-year values forecast at the end of the second quarter.

<sup>2</sup> Retrospective modification due to a change of calculation.

<sup>1</sup> Since 2007, the International Monetary Fund (IMF) has published Financial Soundness Indicators (FSI) for Austria (see also www.imf.org). In contrast to some FSIs which take only domestically owned banks into account, the Financial Stability Report analyzes all banks operating in Austria. For this reason, some of the figures presented here might deviate from the figures published by the IMF.

Source: OeNB.

<sup>1</sup> As from 2008 on, operating expenses refer to staff costs and other administrative expenses only.

<sup>2</sup> End-of-period result expected for the full year before minority interests as a percentage of average total assets and average tier 1 capital, respectively.

<sup>3</sup> All figures represent the ratio of net interest income to total operating income less other operating expenses.

<sup>4</sup> All figures represent the ratio of total operating expenses less other operating expenses to total operating income less other operating expenses.

<sup>5</sup> Retrospective modification due to a change of calculation.

Note: Due to changes in reporting, the comparability of consolidated values as from 2008 with earlier values is limited.

Source: OeNB, ECB.

<sup>1</sup> The indicated figures refer to claims of monetary financial institutions (MFIs, ESA definition) on domestic non-MFIs. Given the differences in the definition of credit institutions according to the Austrian Banking Act and of MFIs according to ESA and differences in the number of borrowers, comparability to "Claims on Domestic Nonbanks" is limited. Due to rounding, figures do not add up to 100% for every year.

#### Source: OeNB.

<sup>1</sup> Based on unconsolidated data. The calculation of capital requirements for market risk combines the standardized approach and internal value-at-risk (VaR) calculations. The latter use previous day's values without taking account of the multiplier. Capital requirements for interest rate instruments and equities are computed by adding up both general and specific position risks. As long as reporting is according to Basel II mutual funds and nonlinear option risks are included in the data according to their risk categories.

<sup>2</sup> Average of the Basel ratio for interest rate risk (loss of present value following a parallel yield curve shift of all currencies by 200 basis points in relation to regulatory capital) weighted by total assets of all Austrian credit institutions excluding banks that operate branches in Austria under freedom of establishment. For banks with a large securities trading book, interest rate instruments of the trading book are not included in the calculation.

#### **Liquidity Risk**

|   | 2008       |         | 2009    |         | 2010    |         | 2011    |         |

| Short-term loans and other liquid assets to short-term liabilities  | 112.7      | 109.0   | 125.0   | 124.8   | 122.9   | 118.9   | 122.9   | 118.1   |
| Liquid resources of the first degree: 5% quantile of the ratio between available and required liquidity of degree 1 <sup>1</sup>  | 140.2      | 149.4   | 143.3   | 139.9   | 146.5   | 145.1   | 150.0   | 152.4   |
| Liquid resources of the second degree: 5% quantile of the ratio between available and required liquidity of degree 1 <sup>1</sup> | 113.1      | 113.5   | 116.8   | 110.8   | 112.4   | 111.3   | 114.1   | 110.9   |

Source: OeNB.

<sup>1</sup> Short-term loans and short-term liabilities (up to 3 months against banks and non-banks). Liquid assets (quoted stocks and bonds, government bonds and eligible collateral, cash and liquidity reserves at apex institutions). The liquidity ratio relates liquid assets to the corresponding liabilities. Article 25 of the Austrian Banking Act defines a minimum ratio of 2.5 % for liquid resources of the first degree (cash ratio) and of 20% for liquid resources of the second degree (quick ratio). The 5% quantile indicates the ratio between available and required liquidity surpassed by 95% of banks on the respective reporting date.

Table A24

#### Solvency

|  | 2008         |                | 2009           |                 | 2010            |               | 2011                       |              |

Source: OeNB.

Note: Owing to the transition to Basel II, the method of calculation of the capital ratio and the tier 1 capital ratio used from the Financial Stability Report 16 (December 2008) on differs from the method used previously. The denominator of both ratios is given by the sum of all regulatory capital requirements multiplied by the factor 12.5. The numerator of the capital ratio is given by tier 1 and tier 2 capital less deduction items (eligible own funds) plus the part of tier 3 capital not exceeding the capital requirement for position risk. The numerator of the tier 1 capital ratio is given by tier 1 capital less deduction items (eligible tier 1 capital). The sum of all capital requirements consists of the capital requirements for credit risk, position risk, settlement risk, operational risk and the transition to Basel II as well as the other capital requirements.

<sup>5</sup> Commonwealth of Independent States (CIS): Armenia (AM), Azerbaijan (AZ), Kazakhstan (KZ), Kyrgyzstan (KG), Moldova (MD), Russia (RU), Tajikistan (TJ), Turkmenistan (TM), Ukraine (UA), Uzbekistan (UZ), Belarus (BY), including Georgia (GE).

<sup>6</sup> Exposure according to BIS includes only domestically controlled banks. As Hypo Alpe Adria was included in the fourth quarter of 2009, comparability with earlier values is limited. <sup>7</sup> Lending (gross lending including risk provisions) to nonbanks by 69 fully consolidated subsidiaries in CESEE according to VERA.

<sup>8</sup> Direct lending to CESEE according to monetary statistics.

Note: Due to changes in reporting, the comparability of values as from 2008 with earlier values is limited.
