The CEEI 2013 will deal with the link between the financial cycle – the notion of financial booms followed by busts – and the real economy, and with related policy challenges. The heterogeneous recovery paths of countries in Central, Eastern and Southeastern Europe (CESEE) appear to partly reflect differences in the pattern of the financial cycle prior to the crisis and varying policy responses to financial busts. Hence the question: How to diagnose and deal with financial booms and the related risks of financial stress? How to assess the sustainability of financial deepening and thus the sustainable level of economic output? What considerations should guide policy reactions to downturns of financial cycles? These and other aspects will be discussed in the light of recent efforts to strengthen (macro)financial sector regulation at national and international levels.

Governor Ewald Nowotny has the pleasure of inviting you to the OeNB's Conference on European Economic Integration (CEEI) 2013 on "Financial Cycles and the Real Economy: Lessons for CESEE."
